

Electricity Authority of Cyprus

Public Lighting Tariff

Code 35

Tariff for Public Lighting

The Tariff for **Public Lighting** is mainly applicable to electricity supplies for the purpose of public lighting or other purposes approved by EAC and it is offered to Municipalities or Local Authorities or other Public Organisations. The charge for every connected lighting point (lamp), which is a feature of this tariff, represents the labour cost for replacing the burnt lamp and its maintenance.

Bi-monthly Low Voltage Public Lighting Tariff (Code 35)

In accordance to this tariff, electricity will be supplied, daily from half an hour after sunset until half an hour before sunrise.

This tariff provides that the supply of electricity will be used during the whole period, as defined above.

The supply period may be increased from sunset to sunrise, if so requested by the Municipalities/Local Authorities concerned.

Relamping, where required, will be carried out once every four weeks.

The bi-monthly charges, at the basic price of €200/M.T. of fuel cost, for the supply of electricity based on this tariff, are given below:

Fixed charge	€4,07
Per unit (KWh) charge	8,94 cent
Additional charge per connected lamp	50,28 cent

Fuel Adjustment Clause

In each bi-monthly period, the price of unit (KWh) charged shall be increased or decreased by the value of the Coefficient of Fuel Adjustment currently in force, for every 5 cent increase or decrease in the basic price of €200 per metric tonne of fuel cost, which cost shall be defined by EAC for the bi-monthly period, based on the purchase price of fuel.

- ❖ The contents of the referred Definitions and Notes are applicable and constitute integral part of the tariff.

DEFINITIONS

“Bi-monthly Period”, where the meter readings are taken bi-monthly, means the period from the commencement of the supply to the first routine meter reading, or the period from one such reading to the next, or the period from one such reading to the termination of the supply on any particular tariff, as the case may be. Where meter readings are taken once every four months, the bi-monthly consumption will be estimated.

“Cost of fuel per metric tonne” means the average cost of fuel during the period coinciding with or preceding the period of consumption, as defined by EAC.

“Unit” means one kilowatt-hour (KWh).

“Low Voltage” means supply of electricity metered at 500 volt or less.

NOTES

- (1) The Coefficient of Fuel Adjustment is currently 0,00140 cent.
- (2) Where to a point of supply, more than one tariff might be applicable, the customers are entitled, once a year, to change their existing tariff to another alternative tariff, which may be applicable. A written notice (application) to that effect is required to be given to EAC before the 30th of November. The new tariff, so chosen, shall become effective as from the first billing period after the 31st of December of the year during which the notice was given.

EAC has the right to decide which of the tariffs are applicable to any point of supply and any type of use.

- (3) For existing customers terminating their supply before the expiration of the normal billing period, as well as for new customers with regard to the first billing period, the Fixed Charges shall be calculated in proportion to the number of days during which the supply was provided.
